

	Counterfeit Prevention Policy Statement		Doc:	RTQC-QM01-A6
			Rev:	2601
			Date:	20-04-2026

Annex 6

Counterfeit Prevention Policy Statement

RAITAN PTE LTD is committed to taking all appropriate and practicable actions to detect, prevent, and report the use of counterfeit, fraudulent, or suspect items (CFSI) within its supply chain and assembly operations. **This commitment is non-negotiable and applies without exception to all components, sub-assemblies, materials, and services incorporated into RAITAN battery systems.** This policy applies to all staff, engineers, procurement personnel, and approved external providers supplying to RAITAN.

In pursuance of this policy, RAITAN commits to:

- Procure all components and materials exclusively from vendors qualified on the RAITAN Approved Vendor List (AVL), ensuring full supply chain traceability from manufacturer to point of assembly.
- Mandate and verify supplier Certificate of Conformity (COC) and internal QC Reports for every incoming delivery of critical components, with no exceptions permitted.
- Maintain a rigorous Incoming Quality Control (IQC) process that physically and functionally verifies all materials against purchase specifications before release to the assembly floor.
- Record and retain full batch and lot-level traceability for all critical components via the Battery Build Sheet (BBS), enabling rapid, targeted recall if a supplier announces a batch defect.
- Immediately quarantine, investigate, and report any item suspected of being counterfeit, fraudulent, or misrepresented, and raise a formal Corrective Action Report (CAR) in accordance with RTQC-QP05.
- Ensure that all personnel involved in procurement, goods receiving, engineering, and assembly receive CFSI awareness training at induction and annually thereafter.
- Maintain the right to audit suppliers and sub-contractors for CFSI controls as a condition of continued approval on the RAITAN AVL.
- Report credible CFSI incidents to relevant authorities and industry bodies where required by customer contract or regulatory obligation.

Issued By:  Signature: Name: Raymond Tan Title: Founder / CEO, RAITAN PTE LTD	Effective Date: 20 April 2026

A6.1 Applicability

This policy applies to all components and materials procured for use in RAITAN battery systems, including but not limited to: lithium-ion cells (all chemistries), Battery Management Systems (BMS), electronic components, connectors, enclosures, and customer-supplied materials. Compliance is a condition of continued approval for all vendors on the RAITAN AVL.

A6.2 Definitions

Term	Definition
Counterfeit Item	An item that is an unauthorised copy, imitation, substitute, or modified part intentionally misrepresented as a genuine part from an authorised source.
Fraudulent Item	A genuine component purposefully misrepresented with respect to its age, origin, test results, or conformance with specification.
Suspect Item	A component for which credible evidence exists that it may be counterfeit or fraudulent, but that has not yet been confirmed as such.
CFSI	Counterfeit, Fraudulent, and Suspect Item — the collective term used throughout this policy.
COC	Certificate of Conformity — mandatory supplier document confirming delivered goods conform to purchase order specifications.
AVL	Approved Vendor List — the RAITAN register of qualified and approved suppliers (Ref: RTQC-QP08).

A6.3 Counterfeit Prevention Process

The following seven-step control process governs RAITAN's approach to CFSI prevention across the entire procurement and assembly lifecycle:

Step	Control Activity	Process Detail	Responsible (Reference)
Step 1	Authorised Procurement Only	All components shall be purchased exclusively from vendors on the RAITAN AVL. Procurement from unverified brokers, grey-market sources, or unqualified online marketplaces is strictly prohibited.	CEO / CFO per RTQC-QP08
Step 2	IQC Verification	All incoming materials must pass IQC before release to the assembly floor: (1) Physical inspection against PO specifications — markings, date codes, lot numbers. (2) Functional testing where applicable (cell voltage, BMS output). (3) Mandatory COC and supplier QC Report check. Items arriving without COC are quarantined and subject to investigation.	OPS Head / QA per RTQC-QP11

Step 3	Traceability Recording	Supplier batch/lot numbers of all critical components are recorded on the Battery Build Sheet (BBS) at point of assembly. Digital copies of COCs and QC reports are filed in Zoho Books and tagged to the respective purchase transaction.	OPS Head / MR per RTQC-QP01, QP02
Step 4	Suspect Item Quarantine & Reporting	Any suspected CFSI shall be: (1) Immediately withdrawn from use and quarantined in the Rejected zone. (2) Tagged with an NC label and reported to the MR. (3) Documented via CAR (RTQC-QP04 & QP05) with photographic evidence. (4) Reported to the original supplier and, where applicable, relevant authorities.	All Staff; MR to co-ordinate
Step 5	Supplier Sanctions	Any vendor supplying CFSI shall be placed on hold immediately pending investigation. Three or more CARs from a single vendor within 12 months, including any CFSI incident, results in automatic removal from the AVL.	CEO / CFO per RTQC-QP08
Step 6	Disposal of Confirmed Counterfeit Items	Confirmed counterfeit parts shall be rendered permanently unusable (destroyed) and not returned to the supplier without investigation. Disposal complies with Singapore NEA e-waste regulations. Destruction is retained as a quality record.	OPS Head / MR per RTQC-QP04
Step 7	Training & Awareness	All procurement, engineering, and assembly staff receive counterfeit prevention awareness training at on-boarding and at each annual QMS awareness review. Training covers identification of common CFSI indicators: blurred markings, date-code inconsistencies, anomalous packaging, unusual pricing.	MR per RTQC-QP07

A6.4 Regulatory and Standards Alignment

This policy is consistent with ISO 9001:2015, Clause 8.4 (Control of Externally Provided Processes, Products, and Services). For defence-sector customers, RAITAN aligns specific project controls to customer contractual requirements where mandated, with reference to DFARS 252.246-7007 as a framework. Battery disposal complies with the Singapore Resource Sustainability Act (Extended Producer Responsibility Framework) and NEA e-waste licensing requirements.

A6.5 Review

This policy is reviewed at each Annual Management Review (RTQC-QP06). Any CFSI incident triggers a full CAR investigation (RTQC-QP05) and mandatory review of the relevant supplier's AVL status (RTQC-QP08).
